

McMAHON
SERVICES

Industrial and Resources Construction

We offer vertically integrated project delivery, from feasibility, engineering and design to complete construction utilising in-house trades.

Capability

Industrial and Resources Construction

McMahon Services has built our business to create a vertically integrated solution for Industrial & Resources Construction Management and Project Delivery. From design, engineering and feasibility to specialist building trades, Indigenous engagement and plant and equipment, McMahon Services offer a complete in-house approach to self-deliver contracts with minimal need for subcontractors.

We offer strong risk mitigation control through solid project governance of costs, time, quality, safety and the environment. Our streamlined, self-delivery approach provides our clients with a 'hassle free' single contractor engagement model. Additional benefits of this model include reduced response time to changing project requirements, the ability to make decisions quickly and a single project management system.

Project Delivery

- ▶ Project Feasibility
- ▶ Design
- ▶ Engineering
- ▶ Approvals
- ▶ Programming
